                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerse and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose grl electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conservative

```

Pred: No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 26, Application US/09220157A
Patent No. 6300110
GENERAL INFORMATION:
APPLICANT: Villeponteau, Bryant
APPLICANT: Feng, Junli
APPLICANT: Adams, Robert R.
TITLE OF INVENTION: Methods and Reagents for Regulating
TITLE OF INVENTION: Telomere Length and Telomerase Activity
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                         DB 4; Length 26; 0.00051;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 73.3%; Score 22; DB 4; Length 26; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                         The present sequence represents an antisense oligonucleotide directed against the human telemerase RNA component gene sequences. The oligonucleotide can be used as an affinity agent in the methods of invention, which are used to purify human telemerase. The methods involve the use of several sequential steps, including the use of two matrixes that bind molecules bearing positive charges, an affinity purification step and a size separation. Telemerase is a particular target of anticancer therapies, and is useful in assays for characterizing (pre)cancerous for blochemical analysis of its activity, and in preparation of antibodies. Fragments of telemerase, or nucleic acide encoding them, are used in vaccines, and for treating over expression of telemerase, particularly in cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RNA component; human telomerase; antisense oligonucleotide; infection; neuroblastoma; bladdar cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide(s) antisense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection
                                        Purification of telomerase on affinity material - useful for, e.g. diagnosis and treatment of cancer
                                                                                                                                                                                                                                                                                                 ö

Sequences shown in AAV41169 to AAV41181 represent antisense
Colgonuclectides to the RNA component of human telomerase (hTR). These
colgonuclectides pecifically hybridise to a nuclectide
acquence within an accessible region of the hTR, but that does not
hybridise to a sequence within the template region of hTR. These
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cancer inhibities the telomerase activity level in a call by
interfering with transcription of the RNA component, decreasing the
half-life of the telomerase RNA component transcript, inhibiting the
polymerase activity of telomerase. These antisense oligonucleocides can
cells in vivo. They can be used in therapeutics for treating or
preventing cancer, for contraception or sterilisation, for
immunosuppression, and for selectively down-regulating specific branches
of the immune system, e.g. a specific subset of T-cells, in

cancer full and and for selectively down-regulating specific branches
of the immune system, e.g. a specific subset of T-cells, in

                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a biotinylated antisense oligonucleotide used in the purification of human telomerase. The invention relates to a purified human telomerase core enzyme protein comprising 2000-fold increased purity compared with a crude extract of cells from adenovirus-transformed kidney cell line (293 cells) and when associated with telomerase RNA component has DNA polymerase activity and a molecular weight of 200-2000 kilo Daltons (kDa). The purified telomerase is useful
                          This invention describes a novel composition comprising human telomerase having at least 2000-fold (preferably at least 6000-fold) increased relative purity compared with crude extract of calls from adenovirus-transformed kidney cell line. The composition is useful for eliciting an immune response in animals and may therefore be used as a vaccine for treating diseases associated with the overexpression of telomerase e.g. cancer. AAZ31626-Z3367 represent oligonucleotides used in the isolation of human clone 28-1 which contains a fragment of the human telomerase described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pruzan RA;

(I) are useful in inhibiting telomerase activity and proliferation of a telomerase positive cell, and in manufacturing a medicament for inhibiting telomerase activity in a cell and in treating telomerase-mediated condition or disease, such as adenocarcinoma of breast, prostate or colon, mixed cell leukaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; telomerase; hTR; cytostatic; anti-inflammatory; adenocarcinoma; breast; prostate; colon; mixed cell leukaemia; Hodgkin's disease; fertility; inflammatory condition; tumour; cancer; veterinary; immunosuppression; telomerase inhibitor; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide useful for inhibiting telomerase activity in cells, or for treating telomerase-mediated condition or disease, such as cancers, tumours, Hodgkin's disease, or inflammatory conditions -
for inducing a humoral or cell-mediated immune response in an animal.
Purified telomerase or immunogenic fragments are useful as vaccines f
treating diseases associated with over-expression of telomerase, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                             Telomerase and/or telomerase associated proteins are also useful for screening compounds to identify agents that alter the association of telomerase-associated proteins, such as nucleolin or EP2H with

Hodgkin's disease, fertility and inflammatory conditions. (I) are also useful in treating a tumour or in manufacturing a medicament for the treatment of tumour. The polymucleotide inhibitors may also be used in diagnostic assays for detecting RNA or DNA. Inhibition of telomerase ectivity in cells in vivo is useful in proph/lactic and therapeutic methods of treating cancer and other disorders involving inappropriate expression of telomerase, and in treating veterinary proliferative for immunosuppression and for selectively down-regulating specific for immunosuppression and for selectively down-regulating specific human telomerase polyuucleotide inhibitor #9, as described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Amplifying signal by contacting nanoparticles (N) having bound oligomuclectides to silver deposited on substrate to form N-silver sandwich that is contacted with silver, reducing agent to form silver-M-silver sandwich -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of an oligonucleotide prepared using phosphoramidite chemistry. A nanoparticle conjugate was prepared by joining the 5-meraptoralkyl oligonucleotide to gold nanoparticles. The nanoparticle conjugate was used to enhance the sandwich amplification of a silver signal on glass slides containing silver sporte from oligonucleotide assays performed using silver staining. This illustrated the method of the invention, which is based on the discoveries that: (1) gold

previously been deposited on gold nanoparticle-ocide
conjugates immobilised by hybridisation on a glass substrate or
conjugates immobilised by hybridisation on a glass substrate or
plate; and (2) that the gold-nanoparticle-oligonucleotide-silver-gold
oligonucleotide structures function as a catalyst for the further
deposition of silver ions. The discoveries were applied to a method
cor amplifying signal by enhancing silver spot serves as a reporter
cor amplifying signal by enhancing silver spot serves as a reporter
cor amplifying signal by enhancing silver spot serves as a reporter
cor the presence of a molecule, including proteins, nucled, calds
and small molecules. The detecting systems include detection of
molecules in situ (e.g. on cells or in a tissue sample) and assays
where the target molecule is bound to a substrate or is captured by
a capture molecule. The method has special utility in increasing
involving detection of target molecules arrayed at discrete
positions on a solid surface. It provides a means for greatly
microchips. The method is simple, economical, and provides a large
enhancing the sensitivity of tests carried out on microarrays or
microchips. The method is simple, economical, and provides a large
enhancement in signal and sensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This primer is used for the RT-PCR amplification of an RNA component of human telomerase (HTR). This is used in the method of invention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA component; human telomerase; antisense oligonucleotide; infection; neuroblastoma; bladder cancer; colon cancer; prostate cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; RT-PCR; primer; ss.*

determining the amount of hTR in a sample. The method comprises amplifying a sequence of hTR and a control polynucleotide from a sample and and determining an amount of amplified hTR and an amount of amplified control polynucleotide. The amount of amplified hTR is normalised with respect to the amount of amplified control polynucleotide to provide a normalised amount of hTR which provides a determination of the amount of hTR which provides antisense oligonucleotides to the hTR which may specifically be used for detection of the amount of the hTR which may specifically be used for detection of an RNA component of the hTR which may specifically be used for detection of an RNA component of the hTR which may specifically be used for detection of an RNA component of the hTR which may specifically be used for detection of an encer of providing prognosis for a cancer patient. The antisense oligonucleotides can be used for inhibiting telomerase activity in both cultured cells and in cells in vivo. They can be used in therapeutics for treating or preventing cancer, for contraception or steriliation, for preventing cancer, for contraception or steriliation, for immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 27 BP; 7 A; 3 C; 10 G; 7 T; 0 other;

Accurate, reliable diagnosis and/or prognosis of cancer, e.g. breast cancer, by analyzing the RNA components of telomerase in plasma or serum

Example; Column 3; 6pp; French

The present invention relates to a method for diagnosing and/or monitoring the evolution of cancers. The method comprises analysing enzyme telomerase RNA in blood plasma or serum. The method is typically used for diagnosing breast, ovarian, stomach or colon cancer and/or monitoring the evolution of the cancers after treatment by chemotherapy or operations. The present sequence is a PCR primer for human telomerase

```
nethod has been developed for detecting telomerase activity in a non-cellular portion of body fluid from a cancer patient using a modified telomeric repeat amplification protocol (TRAP). A method for detecting cancer comprises (a) removing the cellular portion of a body fluid specimen from the patient; (b) preparing a protein extract from the patient; (c) assaying the extract for the presence and quantity of telomerase RNA or telomerase activity; and (d) comparing the results with normal levels, to determine the presence of cancer. The methods are used in cancer diagnosis and prognosis, and also to monitor cancer therapy effectiveness. Unlike prior art telomerase activity assays in cancer patients, the method allows noninvasive sample collection. The methods are also more reliable and less tumour specific than other methods which detect circulating tumour markers. The present sequence represents a human telomerase RNA template PCR primer used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence, a nested PCR primer for the RNA component of human telomerase (RCHT), was used in a 5' RACE procedure. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomerase, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, conditions in a patient. Polynucleotides of at least 25 consecutive nucleotides identical, or complementary to the RCHT sequence linked to hererologous transcriptional regulatory sequences, can be used for the gene therapy of human diseases.

RCHT was derived from a genomic DNA library obtd from the human lung fibroblast cell line W1-38. The RCHT can be used in the recombinant produ. of an active telomerase mol., capable of adding sequences to Chromosomal DNA telomerase, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplasmic conditions in a patient.

Polynucleotides of at least 25 consecutive nucleotides identical, or complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used for the gene therapy of human diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
RNA component; human, telomerase; lung fibroblast; cell line WI-38; recombinant production; synthesis; mutant; detection; mammalian; didentification; maddlating agent; neoplastic condition; transcriptional regulacry sequence; gene therapy; disease; polymerase chain reaction; antisense plasmid; PCR primer; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Telomerase, mammal, antisense, triplex forming oligonucleotide, plasmid; probe, primer; ribozyme, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primer for production of telomerase antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RNA component of mammalian telomerase, esp. human - useful in identifying e.g. candidate telomerase-modulating agents

Amplifying the human represents furth. The RNA and DNA can be used in hybridisation assays to detect or quantify telomerase activity in cells, tissue or fluid samples, e.g. for diagnosis of eukaryotic parasites (yeast and protozoa) or tumours. It is also useful as primers for amplification assays. The truncated or recombinant vertebrate telomerase is used therapeutically to increase telomerase activity (also as reagents in the screening assay) while the RNA or other inhibitors such as antisense molecules, are used to reduce such activity. Typical applications are initiation/restoration of activity to cause senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          directed against e.g. Trypanosoma should cause fewer side effects than drugs currently used to treat such infections. The DNA encodes those parts of hTR RNA essential for activity but are significantly shorter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             or to prevent immortalisation of cells in tumours or parasites. The DNN is also used to produce recombinant telomerase, which can then be used conventionally to raise antibodies for diagnostic detection of telomerase. Detecting telomerase allows early diagnosis of tumour or infection, before clinical signs manifest. Telomerase inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hTR gene; TPC2; TPC3; telomere length; telomerase; human; cancer; gene therapy; diagnosis; PCR; primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The RNA components of (non) human mammalian telomerase(s) especially from mouse, rat and chinese hamster are all claimed. Antisense oligonucleotides can be used to block the activity of the telomerase; probes and primers can be used in detection; vectors and host cells transformed with the isolated telomerase genes can be used for production of telomerases; RNA and DNA ribozymes and triplex forming oligonucleotides directed against the telomerase genes can be used therapeutically as can plasmids. A mouse which lacks the telomerase gene (also claimed) can be used for study of telomere regulation in vivo, and the role it plays in immortalisation. Three primers (AATI1040, AATI1043, AATI1044) were used to produce antisense oligonucleotides which were then used to produce antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a PCR primer from the present invention
            Human TPC2, TPC3 and TR genes - regulate telomere length or modulate telomerase activity
                                                                                                                                                                                                                                                             Gaps
                                                                             Primers R3c and F3b (see AAV19488) were designed for the PCR mapplification of the human telomerase hTR gene (see AAV19481). hTR mRNA levels were showed to correlate with telomerase activity levels in a variety or mortal and immortal cell lines. Methods of the invention allow detection and quantitation of TPC2 (see AAV1940), TPC3 (see AAV1940) and/or TPC2 gene products and can be used to detect immortal cells, especially telomerase positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis; prognosis; eall proliferation; cancer; ageing; ribonucleoprotein; PCR primer; as.
                                                                                                                                                                                                                                                             ö

cc which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT. by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase RNA component; (C) compound; (B) preparation of the hTRT with a telomerase RNA component; (C) detection of the HTRT RNA or protein in a sample by binding a relevant complex tor amplification product with presence of complex or amplification product with presence of in the case of complex or amplification product with presence of in the sample; (C) and (D) increasing the proliferation of a vertebrate cell by increasing the proliferation of a vertebrate and (B) the use of an agent that causes an increase in c) increasing in the manufacture of medicament a medicament and inhibiting the ceffect of ageing or cancer. Inhibitors of telomerase activity. A protein preparation of hTRT can also be used in the new cc activity. A protein preparation of hTRT can also be used in the new cc methods.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6003695

GENERAL INFORMATION:
APPLICANT: Hardin, Susan H.
APPLICANT: Hardin, Ramin
APPLICANT: Hardin, Paul B.
TITLE OF INVENTION: Gene Sequencing and Method Thereof
NUMBER OF SEQUENCES: 566
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fulbright & Jaworski L.L.P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER: U.S.A.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 10

Patent No. 6287769

GREEAL INFORMATION:
APPLICANT: Inoue, Takakazu
APPLICANT: Inoue, Takakazu
TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA FITLE OF INVENTION: insens and Method of Assaying Microorganisms, Method of Analyzing Mi FILE OF INVENTION: insens and Method of Assaying Contaminant
FILE OF INVENTION: 1998-7
CURRENT FILING DATE: 1999-03-10
EARLIER PELING DATE: 1999-03-30
EARLIER FILING DATE: 1998-03-31
EARLIER PILING DATE: 1999-03-16

/noce="Wector: PWD42nv; Purified genomic DNA from M.
musculus C57Bi/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was hydrodynamically Abeared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynuclectide kinase. Adaptor oligonuclectides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114|gb|AF129072.1), a copy-umber
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicilli resistance."

COMMENT

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMAP2 (gql #472114[gb]AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coli Xillo-Gold (Stratagene) cells and selected for ampicillin resistance."

//note="Vector: PWD42ny; Purified genomic DNA from M.
musculus C57BL/61 (male) was obtained from the Jackson
Laboratory Mouse DNA Resources documents/dnares). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orified at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymusleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agaxose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4722114|gb|AP129072:1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli X110-Gold (Stratagene) cells
and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               T. brucer sheared genomic DNA linear GSS 13-DEC-2000 genomic BNA clone 80d02, forward sequence, AL461425 Hard 111860707 GSS 13-DEC-2000 GSS 13-DEC-2000 GSSS.

Direct Submission
Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing
project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton,
Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and
nlu@sanger.ac.uk
Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TRED927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects.
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).

was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclacotide kinase. Adaptor oligonuclacotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoreseis. Vector DNA was prepared from a derivative of pwna2 (gi|472114|gb|RP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xi10-Gold (Stratagene) cells and selected for ampicilin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Furbaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Eukaryota, Logos, Musical, Mangacre, Logos, Mamoud, M., Meenen, E., Pedersen, T., Reilly, M., Rose, M., Rose, R., Stokes, R., Tingey, A., von Niederhausern, A. Mouse whole genome scaffolding with paired end reads from 10kb plasmid inserts

Location/Qualifiers

Location/Qualifiers
was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T# DNA polymerase and T# polymuclaeotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi]4721141 gpl pkT129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E: coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

of pWD42 (gi|4732114|gb|AF129072:1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.05 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were adaptored to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative
                                                                                                                                                                                                                                                                           ö

This sequence is recovered from the left border of the T-DNA. It
indicates an insertion close to or within gene At3g62580. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:

clone="dk-12809-012669"

clone="lk="Arabidopsis thaliana T-DNA insertion lines"

/clone="lkc" was performed on DNA from Arabidopsis thaliana
plants (T1) which were transformed with the T-DNA from

vector pAc161. The lines contain one or more T-DNA from

insertions. The DNA fragment(s) resulting from the PCR

were directly sequenced to determine the genomic sequence

flanking the insertion. Sequences displaying significant

similarity to the A. thalaina nuclear genome sequence

processed for submission. T-DNA derived sequence were

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 131,
